SUMMARY

Backend engineer with 7+ years designing and shipping production APIs, microservices, and data-intensive systems in Python, Node.js (TypeScript), and Go. Built production LLM/RAG and recommendation systems (LangChain, OpenAI & Anthropic APIs, pgvector, Pinecone) and serverless/containerized workloads on AWS (Lambda, ECS, EC2, S3, ALB) with Terraform and GitLab CI/CD pipelines built from scratch. Strong on database performance, including PostgreSQL query optimization and N+1 elimination. Proven remote collaborator across US, Canadian, and European timezones.

EXPERIENCE

Full Stack Engineer | Parallel (Remote)

May 2023 – Present

- Designed, built, and deployed **5+ backend services and microservices** in Python (FastAPI, Flask), Node.js (TypeScript), and Go, exposing REST and WebSocket APIs for real-time product features.
- Built **production RAG (Retrieval-Augmented Generation) systems** powering LLM features at scale, using LangChain with OpenAI and Anthropic APIs and vector search on pgvector and Pinecone.
- Developed and shipped **recommendation systems** delivering personalized results to end users in production.
- Owned the PostgreSQL data layer: tuned queries and **eliminated N+1 query patterns**, keeping API endpoints performant under production load.
- Developed and deployed **6+ AWS Lambda functions** for event-driven and scheduled workloads as part of a serverless architecture.
- Owned AWS infrastructure end-to-end: provisioned and managed **ECS, EC2, S3, and ALB** with **Terraform**, and automated deployment and operational tasks with **Bash scripts**.
- Set up **GitLab CI/CD pipelines from scratch**, automating testing, Docker image builds, and deployments for all services.
- Built high-throughput **web scraping and data ingestion services** with Flask; contributed user-facing features in Next.js (TypeScript).

Lead Software Engineer | MTripleP

Oct 2022 – May 2023

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Built production APIs for **color detection and media feature extraction** used by client applications.
- Improved data processing pipelines for real-time image and video manipulation.

Full Stack Engineer | Nova

Jan 2018 – May 2022

- Built and maintained **REST APIs with Django and Flask** powering client platforms end-to-end.
- Delivered interactive web applications using **Vue.js**, JavaScript, HTML, and CSS.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Golang, SQL, Bash

Backend: FastAPI, Flask, Django, Node.js, Express, REST APIs, WebSockets, GraphQL, Microservices

AI / LLM: RAG pipelines, LangChain, OpenAI API, Anthropic API, pgvector, Pinecone, Recommendation Systems

Databases: PostgreSQL (query optimization, N+1 elimination), MySQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps: AWS (Lambda, ECS, EC2, S3, ALB, IAM), Terraform, Docker, Kubernetes, GitLab CI/CD, Nginx, Linux, DigitalOcean, Azure

Frontend: React.js, Next.js, Vue.js

Other: WebRTC, Web Scraping, Agile/Scrum, Git
