SUMMARY

DevOps-focused software engineer with 7+ years in production systems, including 3+ years of hands-on AWS platform work: provisioning ECS, EC2, S3, ALB, and Lambda with Terraform; building GitLab CI/CD pipelines from scratch; containerizing services with Docker; and automating operations with Bash. Brings deep application-level context from years of backend engineering in Python, Node.js (TypeScript), and Go, enabling fast debugging across the whole stack. Proven remote collaborator across US, Canadian, and European timezones.

EXPERIENCE

Full Stack Engineer (DevOps & Infrastructure) | Parallel (Remote) *May 2023 – Present*

- Owned AWS infrastructure end-to-end: provisioned and managed **ECS, EC2, S3, and ALB** with **Terraform** (Infrastructure as Code).
- Set up **GitLab CI/CD pipelines from scratch**, automating testing, Docker image builds, and deployments for all services.
- Developed and deployed **6+ AWS Lambda functions** for event-driven and scheduled workloads as part of a serverless architecture.
- Wrote **Bash scripts** to automate deployment, maintenance, and operational tasks.
- Containerized and deployed **5+ backend services and microservices** (Python, Node.js/TypeScript, Go) with **Docker** on AWS.
- Kept production APIs performant by tuning PostgreSQL queries and **eliminating N+1 patterns**.
- Built and operated **production RAG/LLM and recommendation services** (LangChain, OpenAI & Anthropic APIs, pgvector, Pinecone) on the same AWS infrastructure.

Lead Software Engineer | MTripleP *Oct 2022 – May 2023*

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Improved data processing pipelines for real-time image and video manipulation.

Full Stack Engineer | Nova *Jan 2018 – May 2022*

- Built and maintained **REST APIs with Django and Flask** powering client platforms end-to-end.
- Delivered interactive web applications using **Vue.js**, JavaScript, HTML, and CSS.

TECHNICAL SKILLS

Cloud & DevOps: AWS (ECS, EC2, S3, ALB, Lambda, IAM), Terraform, Docker, Kubernetes, GitLab CI/CD, Nginx, Bash, Linux, DigitalOcean, Azure

Languages: Python, JavaScript/TypeScript, Golang, SQL, Bash

Backend: FastAPI, Flask, Django, Node.js, Express, REST APIs, WebSockets, GraphQL, Microservices

Databases: PostgreSQL (query optimization, N+1 elimination), MySQL, MongoDB, Redis, Elasticsearch

AI / LLM: RAG pipelines, LangChain, OpenAI API, Anthropic API, pgvector, Pinecone, Recommendation Systems

Other: Web Scraping, Agile/Scrum, Git
