# ARTHUR OBO-NWAKAJI

AI Engineer | LLM Systems · RAG · Agents · Python · Go · AWS

Port Harcourt, Nigeria · Open to Remote (any timezone) & Relocation · +234 816 164 8460

arthuron57@gmail.com · linkedin.com/in/arthur-obo-nwakaji · github.com/Arthurobo · arthurobo.github.io · saidic.com

## SUMMARY

AI engineer with 7+ years of software engineering and 3 years building and deploying production LLM systems: RAG, tool-calling agents with guardrails, evaluation harnesses, and the backend and AWS infrastructure under them. Founder of Saidic, a live AI assistant that answers only from a business's own knowledge. Works in Python, Node.js (TypeScript), and Go. Proven remote collaborator across US, Canadian, and European timezones.

## EXPERIENCE

**Founder & Engineer** | Saidic (saidic.com) *2026 – Present*

- Built and launched an **AI assistant for business websites** that answers only from each business's own knowledge and performs API actions with customer consent.
- Built **hybrid retrieval** that fuses vector search (pgvector), full-text, and exact matching, measured against a labeled question set so answers stay **grounded in the right sources**.
- Designed **deterministic guardrails** so the LLM never takes an action on its own, validated with an **adversarial test suite** covering prompt injection, out-of-scope requests, and false promises.
- Each reply is routed by a small decision model and **checked against its cited sources** before sending, with per-turn logging of retrieval, latency, and cost to stay **reliable and cheap at scale**.

**Senior Backend & Platform Engineer** | Parallel (Remote) *May 2023 – Oct 2026*

- Built **production RAG systems** powering LLM features at scale, using LangChain with OpenAI and Anthropic APIs and vector search on pgvector and Pinecone.
- Developed and shipped **recommendation systems** delivering personalized results to end users in production.
- Improved the **reliability of a production LLM scoring pipeline** (SQS, OpenAI), ensuring consistent, exactly-once results under load.
- Designed, built, and deployed **5+ backend services and microservices** in Python (FastAPI, Flask), Node.js (TypeScript), and Go, exposing REST and WebSocket APIs for real-time product features.
- Owned **AWS infrastructure end-to-end with Terraform IaC** (ECS Fargate, EC2, Lambda, SQS, S3, ALB).

**Lead Software Engineer** | MTripleP *Oct 2022 – May 2023*

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Built production APIs for **color detection and media feature extraction** used by client applications.

**Full Stack Engineer** | Nova *Jan 2018 – May 2022*

- Built and maintained **REST APIs with Django and Flask** and **Vue.js** web applications powering client platforms end-to-end.

## PROJECTS

**AgentFlow** (github.com/Arthurobo/agentflow)**:** Open-source **Go daemon** running Claude Code and OpenCode sessions controlled from a phone via **Cloudflare tunnels or Tailscale**, revocable per-device tokens, race-detector CI, **cosign-signed releases**.

**Scout** (github.com/Arthurobo/scout-agent): Slack hiring agent on **Trigger.dev** with a human approval step; safety enforced in Postgres and code (approver allowlist, draft hash, never-contact-twice index).

**Job Nomad**: Hybrid search (full-text + **pgvector embeddings** + cross-encoder rerank) with a **ranking-quality gate in CI** and quantized local model inference.

## TECHNICAL SKILLS

**AI / LLM:** RAG, hybrid retrieval (pgvector, full-text, RRF), rerankers, tool calling, structured outputs, evals, prompt-injection defenses, LangChain

**Models & APIs:** OpenAI, Anthropic, OpenRouter, Gemini; local inference with ONNX Runtime, sentence-transformers, Ollama

**Languages:** Python, TypeScript/JavaScript, Go, SQL, Bash

**Backend:** FastAPI, Django, Flask, Node.js, Express, WebSockets, Redis/arq, SQS workers, Trigger.dev

**Data:** PostgreSQL + pgvector, Pinecone, Redis, Elasticsearch, MongoDB

**Cloud & DevOps:** AWS (ECS Fargate, Lambda, SQS, EventBridge, S3, IAM/OIDC), Terraform IaC, Docker, GitHub Actions, Cloudflare

## EDUCATION

**Bachelor's degree, Agricultural Economics and Extension** | University of Port Harcourt
