SUMMARY

Backend engineer with 7+ years designing and shipping production APIs, microservices, and data-intensive systems in Python, Node.js (TypeScript), and Go. Builds and deploys production LLM/RAG systems, most recently Saidic, an AI assistant platform I founded. Strong on database performance, event-driven architecture on AWS (SQS, EventBridge, Lambda), and Terraform IaC. Proven remote collaborator across US, Canadian, and European timezones.

EXPERIENCE

Founder & Engineer | Saidic (saidic.com) *2026 – Present*

- Built and launched an **AI assistant for business websites** that answers only from each business's own knowledge and performs API actions with customer consent.
- Architected and run the **entire platform end-to-end**: async FastAPI services, PostgreSQL with pgvector, **Redis-backed workers, and real-time WebSockets**, with every API endpoint covered by automated contract tests.
- Built **hybrid retrieval** that fuses vector search (pgvector), full-text, and exact matching, measured against a labeled question set so answers stay **grounded in the right sources**.

Senior Backend & Platform Engineer | Parallel (Remote) *May 2023 – Oct 2026*

- Designed, built, and deployed **5+ backend services and microservices** in Python (FastAPI, Flask), Node.js (TypeScript), and Go, exposing REST and WebSocket APIs for real-time product features.
- Led performance optimization of the platform's highest-traffic APIs, **redesigning data access and service communication** to bring critical endpoints from timeouts to **sub-second response times**.
- Re-architected background processing around **AWS EventBridge and SQS**, making scheduled jobs and email, SMS, and push notifications **reliable and idempotent**.
- Led **API and cloud security hardening**: enforced authentication across services, retired unused endpoints, and moved CI/CD to **short-lived credentials** with GitHub OIDC and least-privilege IAM.
- Built **production RAG systems** powering LLM features at scale, using LangChain with OpenAI and Anthropic APIs and vector search on pgvector and Pinecone.
- Owned **AWS infrastructure end-to-end with Terraform IaC** (ECS Fargate, EC2, Lambda, SQS, S3, ALB).
- Built reliable **multi-channel notification delivery** (SMS, email, push) with Twilio, SendGrid, and Firebase, including compliance and failover handling.

Lead Software Engineer | MTripleP *Oct 2022 – May 2023*

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Built production APIs for **color detection and media feature extraction** used by client applications.

Full Stack Engineer | Nova *Jan 2018 – May 2022*

- Built and maintained **REST APIs with Django and Flask** and **Vue.js** web applications powering client platforms end-to-end.

PROJECTS

AgentFlow (github.com/Arthurobo/agentflow)**:** Open-source **Go daemon** running Claude Code and OpenCode sessions controlled from a phone via **Cloudflare tunnels or Tailscale**, revocable per-device tokens, race-detector CI, **cosign-signed releases**.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Go, SQL, Bash

Backend: FastAPI, Flask, Django, Node.js, Express, TypeORM, REST APIs, WebSockets, GraphQL, Microservices, SQS/arq/Celery workers

AI / LLM: RAG pipelines, LangChain, OpenAI, Anthropic, OpenRouter, pgvector, Pinecone, embeddings and rerankers, Recommendation Systems

Databases: PostgreSQL (performance tuning, full-text search, pgvector), Redis, MySQL, MongoDB, Elasticsearch

Cloud & DevOps: AWS (ECS Fargate, EC2, Lambda, SQS, EventBridge, S3, ALB, ECR, IAM/OIDC), Terraform IaC, Docker, GitHub Actions, GitLab CI/CD, Nginx, Linux, Cloudflare, Sentry, CloudWatch, DigitalOcean

Frontend: React.js, Next.js, Vue.js

EDUCATION

Bachelor's degree, Agricultural Economics and Extension | University of Port Harcourt
