ARTHUR OBO-NWAKAJI

Senior Platform / DevOps Engineer | AWS · Terraform IaC · CI/CD · Docker

Port Harcourt, Nigeria · Open to Remote (any timezone) & Relocation · +234 816 164 8460

arthuron57@gmail.com · linkedin.com/in/arthur-obo-nwakaji · github.com/Arthurobo · arthurobo.github.io · saidic.com

SUMMARY

Platform engineer with 7+ years in production systems and deep AWS expertise: Terraform IaC across ECS Fargate, EC2, Lambda, SQS, EventBridge, S3, ALB, ECR, and IAM; CI/CD with GitLab and GitHub Actions (OIDC); Docker; and Bash automation. Backend roots in Python, Node.js (TypeScript), and Go make me fast at debugging across the whole stack. Proven remote collaborator across US, Canadian, and European timezones.

EXPERIENCE

Founder & Engineer | Saidic (saidic.com) *2026 – Present*

- Built and launched an **AI assistant for business websites** that answers only from each business's own knowledge and performs API actions with customer consent.
- Runs production and staging with **Docker Compose behind Cloudflare and nginx**, GitHub Actions CI/CD, and a secured outbound gateway with **encrypted credential storage**.

Senior Backend & Platform Engineer | Parallel (Remote) *May 2023 – Oct 2026*

- Owned **AWS infrastructure end-to-end with Terraform IaC** (ECS Fargate, EC2, Lambda, SQS, EventBridge, S3, ALB, ECR, IAM) and automated operations with **Bash**.
- Led **API and cloud security hardening**: enforced authentication across services, retired unused endpoints, and moved CI/CD to **short-lived credentials** with GitHub OIDC and least-privilege IAM.
- Set up **GitLab CI/CD pipelines from scratch** and maintained **GitHub Actions** workflows for testing, Docker image builds, and deployments.
- Re-architected background processing around **AWS EventBridge and SQS**, making scheduled jobs and email, SMS, and push notifications **reliable and idempotent**.
- Built **per-pull-request preview environments** on ECS Fargate Spot with PII-masked database branches.
- Led the **decommissioning of legacy environments and databases** with Terraform, backed by a full dependency audit.
- Simplified the service architecture by **consolidating services and environments**, reducing deployment complexity and infrastructure cost.
- Strengthened **production observability and data protection** with Sentry, CloudWatch alarms, and automated PII masking.

Lead Software Engineer | MTripleP *Oct 2022 – May 2023*

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Built production APIs for **color detection and media feature extraction** used by client applications.

Full Stack Engineer | Nova *Jan 2018 – May 2022*

- Built and maintained **REST APIs with Django and Flask** and **Vue.js** web applications powering client platforms end-to-end.

PROJECTS

AgentFlow (github.com/Arthurobo/agentflow): Open-source **Go daemon** running Claude Code and OpenCode sessions controlled from a phone via **Cloudflare tunnels or Tailscale**, revocable per-device tokens, race-detector CI, **cosign-signed releases**.

TECHNICAL SKILLS

Cloud: AWS (ECS Fargate, EC2, Lambda, SQS, EventBridge, S3, ALB, ECR, IAM, OIDC, CloudWatch), Cloudflare (tunnels, R2), DigitalOcean

IaC & CI/CD: Terraform, GitHub Actions, GitLab CI/CD, GoReleaser, Docker, Docker Compose

Ops & Observability: Linux, systemd, Bash, Nginx, Sentry, CloudWatch alarms, Prometheus, OpenTelemetry, Tailscale

Security: OIDC deploy roles, permission boundaries, key rotation, secrets management, SSRF protection, PII masking

Languages: Python, Go, TypeScript/JavaScript, SQL, Bash

Backend & Data: FastAPI, Django, Node.js, Express, PostgreSQL, Redis, MySQL, MongoDB, Elasticsearch, RAG/LLM services

EDUCATION

Bachelor's degree, Agricultural Economics and Extension | University of Port Harcourt
