SUMMARY

Full stack engineer with 7+ years delivering production web applications end-to-end. Frontend in React, Next.js, Vue.js, and TypeScript; backends in Python (FastAPI, Flask, Django), Node.js, and Go; production LLM/RAG features; deployed on AWS with Terraform IaC and CI/CD. Founder of Saidic, a live AI assistant platform. Proven remote collaborator across US, Canadian, and European timezones.

EXPERIENCE

Founder & Engineer | Saidic (saidic.com) *2026 – Present*

- Built and launched an **AI assistant for business websites** that answers only from each business's own knowledge and performs API actions with customer consent.
- **Two Next.js apps and TypeScript SDKs** on a FastAPI + Postgres/pgvector backend, with real-time WebSockets over Redis pub/sub.
- Built **hybrid retrieval** that fuses vector search (pgvector), full-text, and exact matching, measured against a labeled question set so answers stay **grounded in the right sources**.

Senior Backend & Platform Engineer | Parallel (Remote) *May 2023 – Oct 2026*

- Designed, built, and deployed **5+ backend services and microservices** in Python (FastAPI, Flask), Node.js (TypeScript), and Go, exposing REST and WebSocket APIs for real-time product features.
- Shipped user-facing features in **Next.js, React, and TypeScript**, owning UI implementation through API integration.
- Led performance optimization of the platform's highest-traffic APIs, **redesigning data access and service communication** to bring critical endpoints from timeouts to **sub-second response times**.
- Built **production RAG systems** powering LLM features at scale, using LangChain with OpenAI and Anthropic APIs and vector search on pgvector and Pinecone.
- Developed and shipped **recommendation systems** delivering personalized results to end users in production.
- Re-architected background processing around **AWS EventBridge and SQS**, making scheduled jobs and email, SMS, and push notifications **reliable and idempotent**.
- Led **API and cloud security hardening**: enforced authentication across services, retired unused endpoints, and moved CI/CD to **short-lived credentials** with GitHub OIDC and least-privilege IAM.
- Owned **AWS infrastructure end-to-end with Terraform IaC** (ECS Fargate, EC2, Lambda, SQS, S3, ALB).

Lead Software Engineer | MTripleP *Oct 2022 – May 2023*

- Led development of **ML-driven image and video analysis** solutions with Django and FastAPI.
- Built production APIs for **color detection and media feature extraction** used by client applications.

Full Stack Engineer | Nova *Jan 2018 – May 2022*

- Built and maintained **REST APIs with Django and Flask** and **Vue.js** web applications powering client platforms end-to-end.

PROJECTS

AgentFlow (github.com/Arthurobo/agentflow)**:** Open-source **Go daemon** running Claude Code and OpenCode sessions controlled from a phone via **Cloudflare tunnels or Tailscale**, revocable per-device tokens, race-detector CI, **cosign-signed releases**.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Python, Go, SQL, Bash

Frontend: React.js, Next.js, Vue.js, TypeScript, HTML, CSS

Backend: FastAPI, Flask, Django, Node.js, Express, REST APIs, WebSockets, GraphQL, WebRTC, Microservices

AI / LLM: RAG pipelines, LangChain, OpenAI, Anthropic, OpenRouter, pgvector, Pinecone, Recommendation Systems

Databases: PostgreSQL, Redis, MySQL, MongoDB, Elasticsearch

Cloud & DevOps: AWS (ECS Fargate, EC2, Lambda, SQS, EventBridge, S3, ALB, IAM), Terraform IaC, Docker, GitHub Actions, GitLab CI/CD, Nginx, Linux, Cloudflare

EDUCATION

Bachelor's degree, Agricultural Economics and Extension | University of Port Harcourt
